PROFESSIONAL SUMMARY

Senior Backend Software Engineer with over 9 years of experience building and scaling high-availability microservices for leading Southeast Asian e-commerce and fast-commerce platforms. Specializing in Golang and Java (Spring Boot) architectures, with a proven track record of optimizing API latency, resolving technical debt, and driving infrastructure integrations that directly increase GMV and reduce operational costs. Open to leadership opportunities and relocation.

TECHNICAL SKILLS

Languages: Java, Go, Python, Dart

Frameworks: Spring Boot, Fiber, Dropwizard, Flutter, Gin

Databases: PostgreSQL, Redis, MongoDB

Cloud & DevOps: GCP (Pub/Sub, BigQuery, GCS, Cloud Run, Cloud Scheduler), Terraform, Docker, Datadog, Grafana, AWS

Architecture: Microservices, Event-driven architecture, gRPC, REST APIs

PROFESSIONAL EXPERIENCE

Hypefast *Jakarta, Indonesia (Remote/Hybrid)*

Senior Backend Software Engineer

April 2025 – August 2026

- Slashed average API latency by 35% by heavily refactoring the B2B catalog module.
- Reduced third-party API error rates by over 80% through the implementation of an exponential backoff pattern.
- Engineered an organizational feature to logically group brands into complex HQ and branch hierarchies.
- Eliminated 70% of stable feature flags across all backend services to resolve technical debt, automating the progress tracking via custom scripts.
- Developed "WPScanner," an internal security tool enabling the customer team to automatically identify vulnerabilities across various brand sites.

Astro *Jakarta, Indonesia*

Senior Backend Software Engineer

April 2022 – April 2025

- Driven quarterly GMV increases between 20% - 35% by architecting core order features including GrabMart integrations, multi-order checkout (mix cart), and Astro Balance top-ups.
- Decreased monthly order-related customer support tickets by 25% by engineering an automated SLA adjustment system and revamping the order widget.
- Delivered robust solutions across a Java Spring Boot and Go stack, utilizing gRPC, Redis, and PostgreSQL on GCP.
- Elevated team code quality standards through rigorous pull request reviews, refactoring, and comprehensive unit testing protocols.

Lemonilo *Jakarta, Indonesia*

Backend Software Engineer

June 2020 – December 2021

- Built and deployed backend services supporting a dynamic page CMS for the marketing team's promotions.
- Developed a secure health discussion forum API connecting registered customers directly with medical professionals.
- Programmed gamification and referral engines to drive user acquisition and engagement.

Airy *Jakarta, Indonesia*

Backend Software Engineer

June 2018 – April 2020

- Architected scalable microservices using Java Dropwizard and Go, deployed on Kubernetes via AWS.
- Engineered highly-concurrent backend systems to support flash sale promotions and internal referral tracking.
- Developed the "Airy Click ID" advertisement tracker and complex transaction attribution reporting tools.

- Mentored junior engineers on engineering conventions and led an internal technical presentation on "elasthink," an inverted-index Go library.

Tokopedia *Jakarta, Indonesia*

Backend Software Engineer

August 2016 – June 2018

- Spearheaded the migration of core Order Services from a legacy Perl monolith to modern Go microservices.
- Achieved a 20% to 30% reduction in average endpoint latency post-migration.
- Designed and deployed the automated commission debit system for official store orders.

EDUCATION

Telkom University

B.Sc. of Computer Science — GPA: 3.39/4.00

September 2011 – July 2016
