Experience

Hypefast

Jakarta, Indonesia

Hypefast is a tech-based "house of brands" in Southeast Asia that invests in and scales local, digital-native e-commerce brands by providing capital, retail expertise, and a centralized ecosystem for growth. Worked in sales tech team with Go, REST API, GCP, PostgreSQL stack.

Senior Backend Software Engineer

April 2025 – Present

- Designed and reviewed technical requirement documents for new features in sales team to meet the requirements from the product team and the company budget.
- Increased Catalog B2B module performance by doing refactor resulted in reduction 35% of average API latency, improved third-party API resiliency by using exponential backoff pattern resulted in over 80% reduction of error rates.
- Designed and developed organization function feature which groups brands into hierarchies (HQ and branches)
- Contributed to projects such as simplifying inventory module, catalog sort and filter, and catalog dropship.
- Coordinated in the feature flag removal project (tech debt). Removed 70% stable feature flags across all backend services, and built automated script to update the feature flag removal progress for all backend services.
- Built [WPScanner](#) for customer team to scan vulnerabilities in various hypefast brand sites.

Astro

Jakarta, Indonesia

Astro is one of Indonesia's leading online quick commerce in Indonesia which serves 2 million customers with more than 20,000 products. Worked in order team with Java Springboot, Go, REST API, gRPC, GCP, Redis, PostgreSQL stack.

Senior Backend Software Engineer

April 2022 – April 2025

- Designed and reviewed technical requirement documents for new features in the order and fulfillment team to meet the requirements from the product team and the company budget.
- Designed, developed, and maintained features for order team such as GrabMart integration, super delivery order, Astro kitchen CS order creation, Astro Balance top up, multi order checkout (mix cart) which increased quarterly GMV between 20% - 35%.
- Designed, developed, and maintained features for order and fulfillment team such as order pooling peak time configuration, order widget revamp, additional SLA adjustment (by multiple factors) to reduce customer tickets related to order by 25% on monthly average and to increase the order and fulfillment performance (SLA).
- Maintained and improved code quality by actively reviewing pull requests, refactoring and writing unit tests.

Lemonilo

Jakarta, Indonesia

Lemonilo is Indonesia's leading healthy lifestyle ecosystem serving millions of active users. The platform bridges D2C e-commerce with offline retail distribution through a tech-enabled supply chain, supporting high-traffic flash sales and complex logistics orchestration. Worked in marketing technology team with NodeJS, Go, REST API, Microsoft Azure, Redis, PostgreSQL stack.

Backend Software Engineer

June 2020 – December 2021

- Designed, developed, and maintained back end service for dynamic page CMS for promotions by marketing team.
- Designed, developed, and maintained back end service for health discussion forum for registered customers and doctors.
- Designed, developed, and maintained back end service for gamification and referral promotion program.

Airy

Jakarta, Indonesia

Airy was a high-growth hospitality aggregator focusing on standardizing the budget hotel industry in SE Asia. Built scalable microservices and mobile experiences that supported the company's rapid expansion into the region's largest network of technology-enabled budget accommodations. Worked in marketing technology team with Java Dropwizard, Go, REST API, AWS, Redis, Kubernetes, PostgreSQL stack.

Backend Software Engineer

June 2018 – April 2020

- Designed, developed, and maintained back end service for flash sale promotion, internal referral promotion program, Airy Click ID advertisement tracker, transaction attribution report, and customer segmentation.

- Participated in on-call rotation to support marketing team's daily operation.
- Mentored new software engineers to adapt into Airy's convention and best practices.
- Maintained and improved code quality by actively reviewing pull requests, refactoring and writing unit tests.
- Delivered internal tech talk about [elastthink](#) (a go-based library as alternative to elasticsearch for smaller number of documents which uses inverted index and redis to store indexes).

Tokopedia

Jakarta, Indonesia

Tokopedia is Indonesia's largest technology company and e-commerce marketplace, serving over 100 million monthly active users. The platform handles massive scale transaction volumes and connects millions of merchants with consumers across the archipelago. Worked in order team with Perl, Go, REST API, Redis, PostgreSQL stack.

Backend Software Engineer

August 2016 – June 2018

- Migrated Order Services from Perl monolith to Go service which achieves average 20% to 30% in reduction of endpoint latency.
- Designed and developed autodebit commission from official store in order service.
- Developed features like new checkout flow, video upload for resolution center page.

Skills

Programming Languages: Java, Go, Python, Dart

Frameworks/Libraries: Spring, Fiber, Dropwizard, Flutter, Gin

Databases: PostgreSQL, Redis, MongoDB

Cloud & DevOps: GCP (Pub/Sub, BigQuery, GCS, CloudRun), Terraform, Docker, Datadog, Grafana

Architecture & Design: Microservices, Event-driven architecture, gRPC, REST APIs

Languages: Native in Javanese and Indonesian, proficient in English, limited in Russian.

Education

Telkom University

B.Sc. of Computer Science (GPA 3.39/4.00)

September 2011 - July 2016
